Organic Germanium 50 capsules
71290

Pure Ge-132 Organic Germanium is a unique organogermanium compound, bis-carboxyethyl germanium sesquioxide, sometimes called just germanium sesquioxide. It has unique molecular characteristics which make it virtually unreactive in the body, and its small particle size and unique structure permit it to be readily cleared in the urine as the intact molecule. Potentially, the body may use germanium as a cellular oxygenator. *

We introduced pure organic germanium into the United States in 1986. We recognize the importance of providing pure and tested Ge-132. To assure the quality and purity of our germanium products, we carefully analyze every lot. Testing procedures include identification by infrared spectroscopy, purity by acid group titration, absence of inorganic germanium impurities by color limit test, and solubility test. Hypoallergenic.

Each capsule contains:
Bis-carboxyethyl germanium sesquioxide 150 mg
Other ingredients:
Cellulose, stearic acid.

Suggested Use:
As a dietary supplement, 1 capsule one to five times daily between meals, or as directed by a healthcare practitioner.
