D.A. #34

Carlson D.A. #34 is a natural food enzyme formulation prepared to supplement body secretions to aid in the utilization of food. It is prepared with pancreatic enzymes, pepsin and bile. Pancreatic enzymes (protease, amylase and lipase) are the body's most powerful food enzymes, having the ability to break down protein, starch and fat. They are produced by the pancreas and delivered to the small intestine where they are involved in food utilization. Bile is produced in the liver and involved in the utilization of fat. Each tablet provides sufficient enzyme activity, measured under simulated physiological conditions, to digest 34 grams of dietary protein, 120 grams of dietary starch and 21 grams of dietary fat.
