L-citrulline is a precursor to L-arginine, which then may stimulate the production of nitric oxide and support vasodilation. Supplemental L-citrulline has been shown to increase nitric oxide levels, and to increase blood levels of L-arginine better than supplemental L-arginine. L-citrulline, like L-arginine and L-ornithine, is a metabolite in the urea cycle and is involved in liver detoxification pathways. It is produced in the urea cycle when ornithine transcarbamylase condenses carbamyl phosphate and ornithine. When endogenous supplies of ornithine transcarbamylase are insufficient, supplemental L-citrulline has been shown to support ammonia incorporation and liver detoxification of ammonia. Free form amino acid, high purity, well tolerated.* For additional support, one may include product #70740 Magnesium Malate Forte.

Each 1 and 1/4 teaspoon (3 g) serving contains:
L-Citrulline 3 g

Suggested use:
As a dietary supplement, 1 and 1/4 teaspoons two times daily, or as directed by a healthcare practitioner. Contraindicated for individuals with kidney abnormalities, a hypersensitivity to L-citrulline and for children under 12 years of age.
