Add a Comment

CLA, a distinctive omega-6 fatty acid, has rapidly become one of the most talked about weight loss products since its introduction to the public in the late 90's. While small amounts can be obtained from meat and dairy products, supplementation may have a substantial impact on how effectively our body chemically decomposes and deposits fat in our cells. Recent research has shown that use of CLA has proven to be highly effective in reducing body fat and increasing muscle mass. And with most Americans consuming less than one gram from their diet per day, NOW CLA is a smart choice for anyone trying to burn fat and increase muscle.*
