Usage

Primadophilus for children is designed to deliver helpful bacteria to the gut. These microorganism strains are essential to maintaining healthy intestinal flora. Under normal conditions, trillions of bacteria exist in the intestines. As part of the body's defenses they help maintain good health by preventing harmful microorganisms from infiltrating the body. Medications taken to combat illness or infection can reduce the number of beneficial bacteria as an unwanted side effect. To maintain the healthy balance add Nature's Way Primadophilus for Children to your child's daily health regimen.*

Recommended Daily Dosage

Mix one level teaspoonful of Primadophilus for Children powder (3 grams) per day with a meal. May be added to liquids, infant formulas, or foods. Intensive dosage: After two weeks at the usual dosage, intake may be increased to two level teaspoonfuls of Primadophilus for Children (6 grams) per day. To maintain maximum potency keep refrigerated.

The following list is for serving size of 1 teaspoon (proprietary formula)

Primary Ingredients
Bifidobacterium infantis
Bifidobacterium longum
Lactobacillus acidophilus
Lactobacillus rhamnosus
Proprietary Blend
Vitamin C

Other Ingredients

Sizes & Suggested Retail Price

5oz. - $14.99

Where to BUY?

Synergistic Products

Astragalus
EchinaGuard, Liquid Extract
Garlicin
Sambucol™ for Kids

Quality Issues

Product Quality Issues: This formula is an easy-to-use powder form that readily mixes in any liquid, infant formula or food. Designed for children too young to take capsules, this formula utilizes a special potency and dosage to ensure that enough viable bacteria are introduced into the intestine.

Product Q&A

1. Does this product mix well with water?
   Yes.
