Usage
DHA is an essential fatty acid necessary for mental and visual function. It is the primary structural fatty acid in the gray matter of the brain and retina of the eye and is important for signal transmissions in the brain, eye and nervous system.. Low levels of DHA have been correlated with changes in disposition, memory loss, visual function and other neurological conditions.*

Recommended Daily Dosage
For routine use take one capsule daily with a meal. During pregnancy and lactation take two capsules daily with a meal.

The following list is for serving size of 1 softgel

Primary Ingredients	***Amount***	***USRDA***

Synergistic Products
Evening Primrose Oil, Max Stability
Flax Oil, Softgels
Ginkgold
Nettle
Phosphatidyl Serine
Prenatal Complete

Additional Information
Important throughout life, adequate DHA intake is especially important during fetal and early childhood

development. Scientific studies suggest that early nutritional support with DHA can have a significant effect on long-term mental and visual outcome. DHA levels in the breast milk of US women are among the lowest in the world due to a decline in dietary DHA. Neuromins will elevate the blood levels of DHA in both infant and mother during pregnancy and lactation.
