What characteristic does every cell in the human body share? They all contain substantial amounts of coenzyme Q10. Without an ample supply, our body simply can not function at peak performance. As an active contributor to all aspects of cellular function, CoQ10 has become universally regarded as one of the most vital nutrients ever made available to the public. As a powerful antioxidant, it significantly reduces the oxidation of LDL cholesterol, and is absolutely essential to the production of energy within the mitochondria. And just as the human heart contains high concentrations of this absolutely crucial nutrient, without it we would be unable to produce enough energy to live.*
