Immune response relies on the stimulation of macrophages – white blood cells that scour the body on search and destroy missions targeting harmful bacteria. Unfortunately, these "special forces" are not always on duty - they must first be activated. And that's the role of beta-glucans. They give the "go order" to the body's macrophages. The more beta-glucans in the system, the more macrophages will be called into action. NOW Beta 1-3 Glucan formula is comprised of the most concentrated sources available – Saccharomyces Cerevisae (the inner cell walls of baker's yeast) and Maitake mushroom. As research evolves, consumers are increasingly turning to beta-glucans to give their immune function added firepower.*
