DGL plus Ginger™ These chewable wafers provide Deglycyrrhizinated Licorice - with less than 3% Glycyrrhizinic Acid - in its most effective form. Studies have shown that for DGL to be effective, it must be chewed in the mouth rather than taken as capsules or tablets. The use of DGL avoids the sodium and fluid retention that can be induced by use of the whole licorice extract over time. Clinical studies on DGL have shown its effectiveness in improving digestive comfort and promoting healthy gastric tissues and function.

Ginger (Zingiber officinale) has been used to promote healthy digestion. Impaired digestion often hampers mental performance on account of the accompanying discomfort and sluggish metabolism. Contemporary usage has shown ginger to be effective in supporting digestive functions. The extract is standardized for 5% gingerols, the active constituents which enhance digestion and metabolism.

Proper digestion is essential for the body to absorb all of the nutrients it needs for healthy living. Aging people in many cases have an unhealthy digestive tract causing nutrient deficiencies.
